Silicon Carbide (SiC) Webinar Series: Bidirectional SiC and GaN Switch Technology

Greetings,

SiC—Silicon Carbide has become a key player in the semiconductor industry in recent years. SiC devices are displacing their incumbent silicon counterparts in several high-volume power applications.

In the **first webinar**, we discussed SiC material properties and key applications.

In the **second webinar** of the SiC series, we discussed key aspects of SiC fabrication and non-CMOS compatible processes that have been streamlined to allow for mass SiC chip fabrication in conventional Si mature fabs.

*If you missed these webinars, you can still register to receive the presentation recordings.

In the **third webinar** of the SiC series, we'll explore:

- Advantages of bidirectional SiC and GaN switch technology
- Performance advantages of monolithic bidirectional switches

WEBINAR SPEAKER

r. Victor Veliadis
Executive Director and Chief Technology Officer
PowerAmerica
